

COFFEE

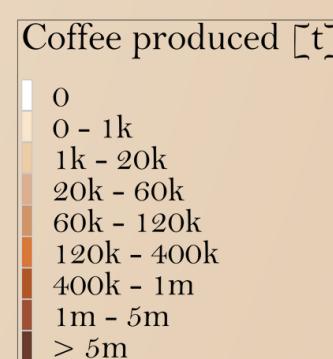

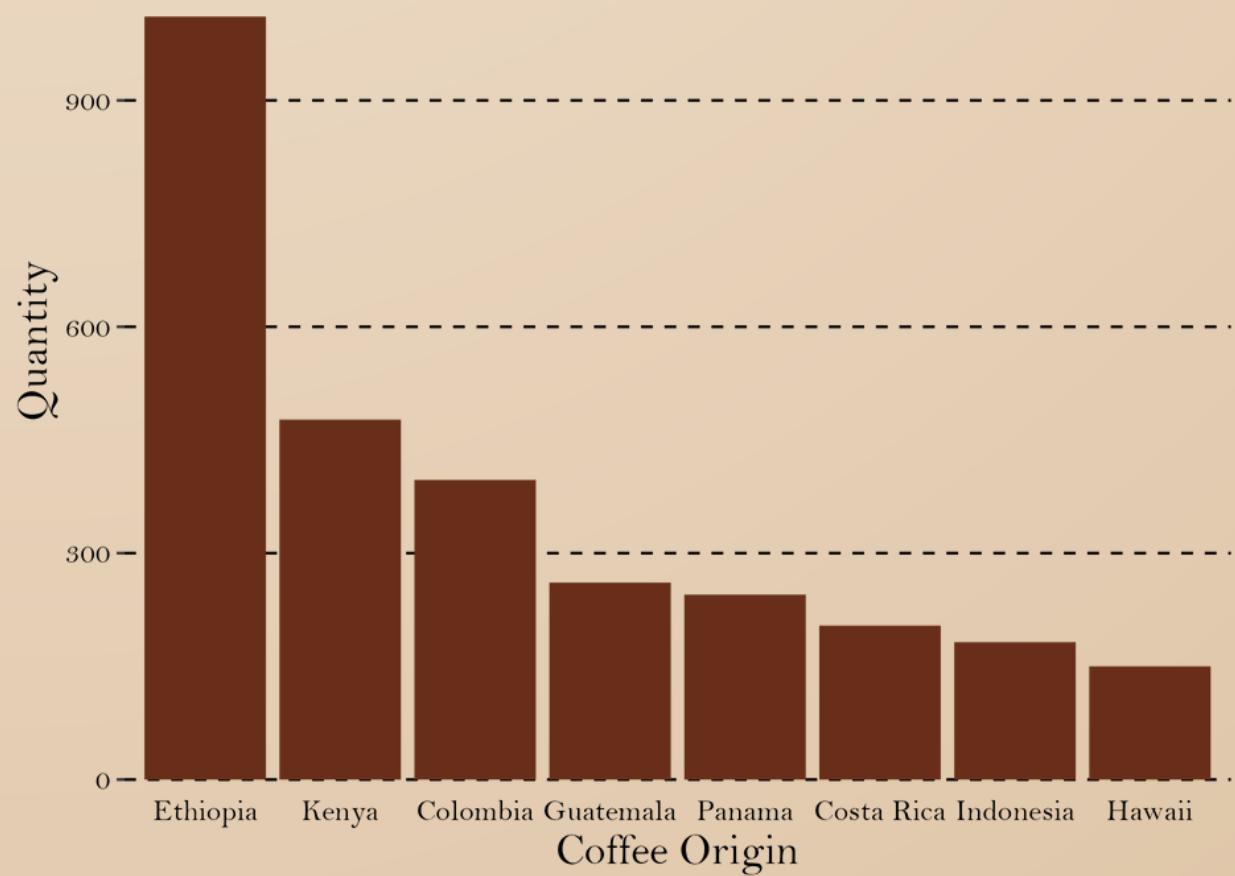

Sip. Smile. Repeat.

Production

Coffee is produced from coffee beans, which grow on a plant called *coffeea*. From the map on the right, it is visible that 90% of coffee is produced between the tropics of Cancer and Capricorn, the land known as the coffee belt. That is because the *coffeea* plant needs warm temperatures (18-26°C) and regular rainfall for optimal vegetation. As you can see, the world's largest coffee producer is Brazil (over 30% of global coffee production).

Coffee assessment

This evaluation of coffee beans involves experienced coffee tasters, who carefully assess various sensory attributes to determine the overall quality of the coffee. Reviewers take into account several criteria when evaluating coffee beans. They use a 10-point scale to describe factors such as sweetness, aftertaste, aroma and acidity. Based on their assessments, each coffee is given a rating score from 0 to 100. The chart on the left is a visual representation of the origins of the coffee beans that scored over 90 points during assessment .

In addition to the basic taste ratings of coffee, each critic writes their own detailed review, describing the coffee's flavor in depth. The wordclouds below provide a visual representation of the words and adjectives most frequently used in coffee reviews from the top-rating coffee-producing nations.

Does coffee make us happy?

It is said that coffee is a magical elixir that awakens both body and soul, so for enthusiasts of this aromatic beverage, the conclusions drawn from the displayed chart may come as a bit of a surprise. It turns out that in countries where larger amounts of coffee are consumed per capita, the overall level of life satisfaction appears to be significantly lower. The data on the level of happiness comes from the "World Happiness Report," which examined how happy residents of a particular city perceive themselves to be. Even though there is a clear correlation, let's be honest, could any of us truly resist the aroma of freshly ground coffee in the morning?

Coffee vs Happiness
